Robert Han – Lead UI Designer

So... what the heck is Sleep Blaster?

Sleep Blaster... It's the
default alarm clock
application, essentially.

No, genius. It has an extra
functionality which makes it
awesome.

It's a location-based alarm clock. Users define the location of where they want to wake up.

But what if there are applications like that already out there... And these guys are just copying them for easy money?

What if I told you... there are
lots of problems with those
applications?

They utilize point-based location, which is unreliable. Also doesn't help that they constantly call on GPS, which is a huge battery drain.

Sleep Blaster is developed such that users can actually draw the boundaries such that, once crossed, the alarm goes off.

I still don't understand...
Isn't that basically the same
thing?

QuickTime™ and a
decompressor
are needed to see this picture.

Am I the only one here who
has questions?

Nope. Ask away!
