152 Syllabus

Instructor: Wesley Pegden

September 5, 2007

Textbook: James Stewart, Calculus (Early Transcendentals) 5e., Brooks/Cole Publishing Co. We’ll be covering chapters 6-11, but not necessarily in that order. If you have a different edition of this textbook, it will probably be okay, since I’m planning on assigning nontextbook homework problems anyways.

They say a calculator is required for this course. That’s not really quite true in this case. You’re won’t be allowed to use one on any of the exams or quizzes, and they aren’t necessary for the homework. So, if you don’t already have one and would rather keep your $100, that’s fine with me.

The final grade will be out of 600 points. The points will come from:
100pts (16.67%): First Midterm
100pts (16.67%): Second Midterm
200pts (33.33%): Final Exam
100pts (16.67%): Workshop
100pts (16.67%): Quizzes

There will be a short quiz at least once and often twice a week. Homework will be assigned and corrected, but will not factor into the final grade.

There is general course information up at http://www.math.rutgers.edu/courses/151-152/. I will make a course webpage soon.

My email address is pegden@math.rutgers.edu.

I’m tentatively setting office hours as the period immediately following class on Friday, but this may change. You can always also email me to try to setup a time to meet.
